

FREE CHEAT SHEET

50 AI Prompts That Replace **50** **Hours** of Marketing Work (Per Month)

Copy-paste these into ChatGPT, Claude, or Gemini and watch your productivity explode.

AI Shortcut for Marketers

[Your Name]

Why This Cheat Sheet Exists

Here's the uncomfortable truth about AI in marketing:

88% of marketers say they use AI. Only 5% are getting real results from it.

The difference isn't intelligence. It's not budget. It's not having access to some secret tool.

The difference is knowing what to ask.

Most marketers open ChatGPT, type something vague like "write me a blog post about email marketing," get a generic response, and walk away thinking AI is overhyped.

But the marketers who are saving 10-15 hours per week? They're using **specific, structured prompts** designed for specific marketing tasks. They're not chatting with AI — they're deploying it.

This cheat sheet gives you 50 of those prompts.

How to Use This Guide

1. **Find your task.** Prompts are organized by marketing function — content, email, SEO, ads, research, analytics, and strategy.
2. **Copy the prompt.** Each one is ready to paste. Replace the [bracketed placeholders] with your specific details.
3. **Read the pro tip.** The one-liner below each prompt will help you get a 2-3x better output on your first try.
4. **Iterate.** The first output is your starting point, not your final draft. Ask follow-up questions. Say "make it more specific" or "add data to support point #3."

These prompts work with **ChatGPT, Claude, Gemini, Copilot**, or any major AI assistant. They're tool-agnostic — the power is in the structure.

Content Creation

Save 12-15 hours/month on content ideation, writing, and repurposing.

1

The Blog Post Architect

You are an expert content strategist for [industry/niche]. Create a detailed blog post outline for the topic: "[topic]." The target audience is [audience description]. Include: a compelling headline (use a number or "how to" format), a hook intro paragraph, 5-7 H2 subheadings with 2-3 bullet points of key ideas under each, a conclusion with a clear CTA, and 3 internal linking opportunities. The tone should be [professional/conversational/authoritative].

What it does: Generates a complete, structured blog outline you can hand to a writer (or expand with AI) in under 2 minutes instead of 45 minutes of staring at a blank doc.

Pro tip: Feed it a competitor's top-performing blog post URL first and say "analyze this, then create something better and more comprehensive on the same topic."

2

The Social Media Content Calendar

Create a 2-week social media content calendar for [brand/company] targeting [audience]. We post on [platforms, e.g., LinkedIn, Instagram, Twitter/X]. Our content pillars are: [pillar 1], [pillar 2], [pillar 3]. For each post, provide: the platform, post type (text, carousel, video, poll), the full caption/copy, 3-5 relevant hashtags, and the best time to post. Include a mix of educational, entertaining, and promotional content at a 60/30/10 ratio.

What it does: Replaces 3-4 hours of content calendar planning with a complete, ready-to-schedule 2-week plan.

Pro tip: Add "include one trending topic or news hook per week" to keep the calendar feeling fresh and timely.

3

The Headline Generator

Generate 20 headline variations for a [blog post/landing page/email] about [topic]. The target audience is [audience]. Use a mix of these proven frameworks: How-To, Listicle (number-based), Question, Fear of Missing Out, Curiosity Gap, and Direct Benefit. Rate each headline 1-10 for click-worthiness and explain your rating in one sentence.

What it does: Produces 20 headline options with built-in quality scoring, replacing the 30-60 minutes you'd spend brainstorming and second-guessing.

Pro tip: Take the top 3 rated headlines and ask: "Now combine the best elements of these three into one ultimate headline."

4

The Content Repurposing Engine

I have a [blog post/podcast transcript/webinar recording/video script] about [topic]. Here is the content: [paste content]. Repurpose this into ALL of the following: (1) 3 LinkedIn posts with hooks, (2) a Twitter/X thread of 7 tweets, (3) 2 Instagram carousel concepts (slide-by-slide text), (4) 1 email newsletter summary, (5) 5 pull quotes for social graphics, (6) 1 YouTube Shorts/Reels script (under 60 seconds). Maintain the original insights but adapt the tone and format for each platform.

What it does: Turns one piece of content into 12+ assets across every platform. This single prompt replaces 3-5 hours of manual repurposing.

Pro tip: Always paste the original content rather than just describing it. AI works 10x better with source material than with summaries.

5

The First Draft Writer

Write a 1,200-1,500 word blog post based on this outline: [paste outline]. The target reader is [audience persona]. Write in a [tone] voice. Use short paragraphs (2-3 sentences max). Include at least 2 specific statistics or data points (cite sources or mark as [NEEDS SOURCE]). Open with a hook that creates tension or curiosity. End with a clear CTA to [desired action]. Use transition phrases between sections. Avoid jargon unless defining it.

What it does: Produces a solid first draft in 60 seconds that would take 2-3 hours to write from scratch. You'll still edit, but you're starting at 70% instead of 0%.

Pro tip: After the first draft, say "now rewrite the intro to be more provocative and cut any sentence that doesn't add new information."

Create a compelling case study based on these details: Client: [name/industry]. Challenge: [what problem they faced]. Solution: [what we did]. Results: [specific metrics/outcomes]. Write it in this structure: (1) Attention-grabbing headline with the key result, (2) The Challenge (2-3 paragraphs, make the reader feel the pain), (3) The Solution (what we did, step by step), (4) The Results (lead with the biggest number, include 3-5 specific metrics), (5) Client quote (write a realistic testimonial they might give), (6) CTA. Keep it under 800 words.

What it does: Transforms raw client data into a polished, persuasive case study in minutes instead of the typical 4-6 hours.

Pro tip: Even if you don't have exact metrics, give ranges or estimates. AI will structure them compellingly. You can verify and adjust later.

7

The Content Gap Finder

I'm a [role] at [company] in the [industry] space. Our blog currently covers these topics: [list 5-10 recent topics]. Our top 3 competitors are: [competitor 1], [competitor 2], [competitor 3]. Based on common content strategies in our industry, identify: (1) 10 high-value topics we're NOT covering that our competitors likely are, (2) 5 emerging topics in our space that almost nobody is covering yet, (3) 3 "pillar content" ideas that could rank for high-volume keywords. For each suggestion, explain why it matters and estimate search intent.

What it does: Replaces hours of competitive content analysis and keyword research with a prioritized list of content opportunities.

Pro tip: Follow up with "Now rank these by estimated business impact (ability to drive leads, not just traffic) and create a 90-day content roadmap from the top 10."

8

The Tone-of-Voice Translator

Here is a piece of content written in a [current tone, e.g., formal/corporate] voice: [paste content]. Rewrite it in a [target tone, e.g., conversational and witty / bold and provocative / warm and empathetic] voice while keeping all the key information and arguments intact. The target audience is [audience]. Make it sound like a [smart friend / industry insider / trusted advisor] is talking to them.

What it does: Instantly adapts content for different audiences or platforms without rewriting from scratch.

Pro tip: Give it a specific voice reference: "Write it in the style of [brand or person known for that tone]."

9

The Video Script Generator

Write a script for a [length, e.g., 90-second] video about [topic] for [platform, e.g., YouTube Shorts / Instagram Reels / TikTok]. Target audience: [audience]. Structure: (1) Hook (first 3 seconds – must stop the scroll), (2) Problem or tension (10 seconds), (3) Key insight or solution (30-40 seconds), (4) Proof or example (15-20 seconds), (5) CTA (5-10 seconds). Write it as a spoken script with [VISUAL CUE] notes in brackets. Keep the language conversational.

What it does: Creates a ready-to-film video script with visual direction in 2 minutes instead of the usual 1-2 hours.

Pro tip: Add "the hook must create a knowledge gap or challenge a common belief" for maximum scroll-stopping power.

10

The Content Brief for Writers

Create a detailed content brief for a freelance writer. Topic: "[topic]". Target keyword: [primary keyword]. Word count: [target]. Include: (1) Working title and 3 alternatives, (2) Target audience and their awareness level, (3) Search intent analysis, (4) Required H2/H3 structure, (5) Key points to cover under each section, (6) 3-5 competitor articles to reference, (7) Internal links to include: [list URLs], (8) CTA and desired reader action, (9) Tone and style guidelines, (10) SEO requirements.

What it does: Produces a comprehensive writer brief that ensures consistent, high-quality output from any freelancer. Saves 45-60 minutes per brief.

Pro tip: Save your best AI-generated briefs as templates. Next time, just say "use this brief format [paste template] for a new topic: [new topic]."

→ Want the full system behind these prompts?

Join the AI Shortcut for Marketers — The 5-Day Sprint. [\[LINK\]](#)

Ad Copy & Landing Pages

Save 8-10 hours/month on ad creation, testing, and landing page optimization.

11

The Facebook/Meta Ad Variation Machine

Write 5 variations of a Facebook/Instagram ad for [product/service]. Target audience: [audience description, including age, interests, pain points]. The offer is: [offer details]. For each variation, provide: (1) Primary text (125 words max, hook in the first line), (2) Headline (40 characters max), (3) Description (30 characters max), (4) CTA button recommendation. Use these angles: Variation 1 = Pain point, Variation 2 = Social proof, Variation 3 = Curiosity/question, Variation 4 = Direct benefit, Variation 5 = Urgency/scarcity.

What it does: Generates a complete A/B testing suite of 5 ad variations in different psychological angles. Replaces 2-3 hours of copywriting.

Pro tip: After generating, ask "which of these 5 would you predict has the highest CTR and why?" to pressure-test before spending ad budget.

Write complete landing page copy for [product/service/offer]. Target audience: [persona]. Price: [price or "free"]. Goal: [email signup / purchase / demo booking]. Use this structure: (1) Hero headline (benefit-driven, under 10 words), (2) Subheadline (expand the promise, 15-25 words), (3) Problem section (3 short paragraphs agitating the pain), (4) Solution section (introduce the offer as the answer), (5) 5-7 benefit bullets (start each with a verb), (6) Social proof section (write 2 realistic testimonials and 3 trust stats), (7) FAQ (4 common objections, handled), (8) Final CTA with urgency element.

What it does: Produces a complete, conversion-optimized landing page in one prompt. Replaces 4-8 hours of copywriting.

Pro tip: Feed it your best-performing existing landing page first and say "analyze what makes this convert, then write a new page for [new offer] using the same principles."

13

The Google Ads Copy Generator

Create 5 Google Search ad variations for the keyword "[target keyword]". My business is [business description]. The landing page URL is [URL]. For each variation, provide: (1) Headline 1 (30 characters max, include keyword), (2) Headline 2 (30 characters max, include benefit), (3) Headline 3 (30 characters max, include CTA), (4) Description 1 (90 characters max), (5) Description 2 (90 characters max). Ensure each variation uses a different angle: feature, benefit, social proof, urgency, and question.

What it does: Creates 5 ready-to-upload Google Ads variations with proper character limits. Saves 1-2 hours per ad group.

Pro tip: Add "also suggest 5 negative keywords I should exclude to avoid wasted spend" for bonus optimization.

14

The A/B Test Hypothesis Generator

I'm running [Facebook ads / Google ads / email campaigns / landing page tests] for [product/service]. Current performance: [share metrics like CTR, conversion rate, CPA]. My current [headline/copy/CTA] is: "[paste current version]". Generate 5 A/B test hypotheses. For each, provide: (1) What to change and why, (2) The new variation copy, (3) The expected impact (higher CTR, lower CPA, etc.), (4) The psychological principle behind the change. Rank them by expected impact.

What it does: Turns your current performance data into a prioritized testing roadmap with ready-to-run variations. Saves 2-3 hours of analysis.

Pro tip: Share your results after running the test and ask "based on these results, what should I test next?" to create a continuous optimization loop.

15

The Ad Hook Library

Generate 15 scroll-stopping ad hooks for [product/service] targeting [audience]. Each hook should be 1-2 sentences max and designed to stop someone mid-scroll on [Facebook/Instagram/LinkedIn/TikTok]. Use these hook types (at least 2 of each): (1) Controversial opinion, (2) Surprising statistic, (3) "I was wrong about..." confession, (4) Direct challenge, (5) Before/after contrast, (6) "Stop doing X" command, (7) Specific result/number. Mark each with the hook type used.

What it does: Builds a library of 15 tested hook formats you can rotate through your ad campaigns. The hook is 80% of whether someone reads your ad.

Pro tip: Save the hooks that perform best and ask AI to "generate 10 more hooks in the same style as this one: [paste winning hook]."

16

The Landing Page Headline Optimizer

My current landing page headline is: "[paste headline]." The page converts at [X%]. Target audience: [audience]. Offer: [what they get]. Generate 10 alternative headlines using these frameworks: (1) PAS – Pain, Agitate, Solution, (2) 4U – Useful, Urgent, Unique, Ultra-specific, (3) Before/After/Bridge, (4) "How to [desired outcome] without [feared obstacle]", (5) Number + Trigger Word + Adjective + Keyword + Promise. For each, explain which psychological trigger it activates.

What it does: Gives you 10 data-informed headline alternatives with the reasoning behind each. Replaces hours of copywriting guesswork.

Pro tip: Test the top 3 with a tool like Google Optimize or just rotate them weekly and track conversion rates manually.

Create a 3-step retargeting ad sequence for [product/service]. The audience visited [landing page / product page / pricing page] but didn't convert. For each step: (1) Timing (days after visit), (2) Ad angle and psychological approach, (3) Primary text (under 125 words), (4) Headline, (5) Visual concept suggestion. Step 1 should address the most common objection. Step 2 should use social proof. Step 3 should create urgency. Include a suggested audience exclusion strategy.

What it does: Creates a complete retargeting funnel with strategic sequencing. Most marketers just run one generic retargeting ad — this gives you a conversion-optimized sequence.

Pro tip: Add "also write a 'win-back' ad for people who haven't visited in 30+ days" to extend the sequence.

I need to optimize the call-to-action on my [landing page / email / ad]. Current CTA: "[paste current CTA]." The offer is [describe offer]. The target audience is [audience]. Their biggest hesitation is likely [objection]. Generate 10 CTA button text alternatives and 5 supporting micro-copy lines (the text that appears near the button). For each CTA, explain the psychological principle it uses. Also suggest what NOT to put on a CTA button and why.

What it does: Transforms your generic "Submit" or "Sign Up" into a conversion-optimized CTA with supporting copy. Small CTA changes can lift conversion rates 10-30%.

Pro tip: The best CTAs complete the sentence "I want to..." from the user's perspective. Test first-person ("Get My Free Guide") vs. second-person ("Get Your Free Guide").

→ These prompts are just the beginning.

Get the complete AI marketing system in the 5-Day Sprint. [\[LINK\]](#)

SEO & Keyword Research

Save 6-8 hours/month on keyword research, on-page optimization, and content gap analysis.

19

The Keyword Cluster Builder

I'm targeting the primary keyword "[main keyword]" for my [website/blog] in the [industry] space. Build a keyword cluster around this topic. Include: (1) 5-7 supporting keywords (long-tail variations), (2) 5 related questions people search for, (3) 3 comparison keywords ("[topic] vs [alternative]"), (4) 3 commercial intent keywords ("best [topic]," "[topic] pricing"), (5) Suggested content type for each keyword. Organize by search intent: informational, navigational, commercial, transactional.

What it does: Creates a complete keyword cluster strategy from a single seed keyword. Replaces 2-3 hours of manual keyword research.

Pro tip: Run this for your top 5 keywords and you'll have a 3-month SEO content calendar in under 30 minutes.

20

The Meta Description Machine

Write 5 meta description variations for a page targeting the keyword "[keyword]". The page is about [brief description]. Each meta description must: (1) Be 150-160 characters exactly, (2) Include the target keyword naturally, (3) Include a clear value proposition, (4) End with a CTA or curiosity hook, (5) Use a different angle (benefit, question, statistic, how-to, urgency). Show the character count for each.

What it does: Generates 5 optimized meta descriptions with exact character counts. Most marketers spend 15-20 minutes per meta description — this does 5 in 30 seconds.

Pro tip: Ask "which of these would get the highest CTR in search results and why?" to pick the winner.

21

The On-Page SEO Auditor

Audit this page content for on-page SEO: [paste content or URL]. Target keyword: "[keyword]". Analyze: (1) Title tag optimization, (2) H1/H2/H3 structure and keyword usage, (3) Keyword density and placement, (4) Internal linking opportunities, (5) Content length vs. competitors, (6) Readability score, (7) Missing schema markup opportunities. Provide a score out of 100 and a prioritized list of fixes with expected impact.

What it does: Provides a comprehensive on-page SEO audit with actionable fixes, replacing 1-2 hours of manual analysis per page.

Pro tip: Run this on your top 10 pages and fix the highest-impact items first. 80% of SEO gains come from 20% of the fixes.

22

The FAQ Schema Generator

Generate 8 FAQ questions and answers for a page about "[topic]" targeting the keyword "[keyword]". Each answer should be 2-3 sentences, include the keyword naturally, and address a real concern or question the target audience ([audience]) would have. Then format all 8 Q&As as valid JSON-LD FAQ schema markup I can paste directly into my page's <head> section.

What it does: Creates SEO-optimized FAQ content AND the technical schema markup in one prompt. Saves 30-45 minutes and can earn rich snippets in search results.

Pro tip: Use Google's "People Also Ask" for your keyword as inspiration — paste those questions and say "use these as the FAQ questions."

23

The Internal Linking Strategist

Here are the pages on my website: [list 10-20 page titles and URLs]. I'm publishing a new page about "[new page topic]" targeting "[keyword]". Recommend: (1) Which existing pages should link TO the new page (and suggest anchor text), (2) Which existing pages the new page should link TO (and suggest anchor text), (3) Any content gaps that would strengthen the internal linking cluster, (4) A visual sitemap showing the linking relationships.

What it does: Creates a strategic internal linking plan that strengthens your site's topical authority. Most marketers skip this — it's a huge SEO advantage.

Pro tip: Run this every time you publish a new page. Consistent internal linking compounds over time and is one of the most underrated SEO tactics.

Here are my blog posts from the past 12 months with their current traffic: [paste list with titles, URLs, and monthly pageviews]. Identify: (1) Posts that are likely declining in rankings (based on topic freshness and competition), (2) Posts with the highest refresh ROI (decent traffic that could grow with updates), (3) For each recommended refresh, specify exactly what to update: new stats, additional sections, updated examples, better headlines. Prioritize by expected traffic impact.

What it does: Creates a content refresh strategy that can recover lost rankings and boost existing content. Refreshing old content is often 3-5x more efficient than creating new content.

Pro tip: Focus on posts that rank positions 4-15 — they're close to page 1 and a refresh can push them into the top 3.

I want to win the featured snippet for the query "[search query]." The current featured snippet shows: [describe what's currently there]. My page is about [topic] and currently ranks [position]. Rewrite my content section to: (1) Directly answer the query in 40-60 words (paragraph snippet format), (2) Create a list-format answer (for list snippets), (3) Create a table-format answer (for table snippets). For each format, explain why it might win the snippet and what formatting to use in my HTML.

What it does: Gives you three optimized content formats designed to steal the featured snippet position. Featured snippets get 8-12% of all clicks.

Pro tip: Add the snippet-optimized content directly below your H2 that matches the query. Google pulls snippets from concise, well-structured answers near relevant headings.

Competitive Intelligence & Market Research

Save 8-12 hours/month on competitor analysis, audience research, and market insights.

26

The Competitor Deep Dive

Conduct a comprehensive competitive analysis of [competitor name/URL]. Analyze: (1) Their core value proposition and positioning, (2) Pricing strategy and model, (3) Content strategy (topics, frequency, formats), (4) Social media presence and engagement, (5) Strengths (what they do better than us), (6) Weaknesses (where they fall short), (7) Their apparent target audience. Conclude with: 3 specific things we should steal/adapt and 1 major opportunity they're missing that we can own.

What it does: Produces a structured competitive analysis that would take a junior marketer 4-6 hours of manual research.

Pro tip: Paste their actual homepage copy, pricing page, and a few social posts for much more specific analysis.

Analyze these customer reviews of [product/competitor]: [paste 15-20 reviews]. Extract: (1) Top 5 things customers love (with exact quotes), (2) Top 5 complaints or frustrations (with exact quotes), (3) Emotional language patterns (words and phrases customers use repeatedly), (4) Unmet needs or feature requests, (5) The #1 reason people buy, (6) The #1 reason people almost didn't buy. Then write 3 marketing messages based directly on the voice-of-customer language you found.

What it does: Turns raw customer reviews into marketing gold — real language, real objections, real desires. This is the foundation of copy that converts.

Pro tip: Mine reviews from competitors' products, not just your own. Their customers' complaints are your marketing opportunities.

Create a detailed buyer persona for [product/service]. Industry: [industry]. Price point: [price]. Include: (1) Demographics (age, role, company size, income), (2) Psychographics (values, fears, aspirations), (3) Day-in-the-life description (what their typical workday looks like), (4) Top 5 pain points related to [problem you solve], (5) Where they consume content (platforms, podcasts, newsletters), (6) Their buying process (who else is involved, what triggers a purchase), (7) Objections they'll have, (8) The exact sentence they'd use to describe their problem to a colleague.

What it does: Creates a rich, actionable buyer persona that goes beyond basic demographics. This informs every piece of marketing you create.

Pro tip: Create 2-3 personas and ask "which of these personas would be the easiest to convert and why?" to prioritize your targeting.

29

The Market Sizing Estimator

Estimate the market size for [product/service idea] targeting [audience] in [geography]. Provide: (1) TAM (Total Addressable Market) with calculation methodology, (2) SAM (Serviceable Addressable Market), (3) SOM (Serviceable Obtainable Market) for year 1, (4) Key assumptions behind each number, (5) 3 comparable companies/products and their estimated revenue, (6) Growth rate estimate for this market over the next 3 years. Be transparent about what's estimated vs. data-backed.

What it does: Produces a market sizing analysis suitable for internal planning or investor conversations. Saves 3-5 hours of research and spreadsheet work.

Pro tip: Always cross-reference AI estimates with at least one real data source. Use this as a starting framework, not a final answer.

30

The Trend Spotter

Identify the top 10 emerging trends in [industry/niche] that will impact marketing strategies in the next 12 months. For each trend: (1) What it is (one-sentence description), (2) Why it matters for marketers, (3) Current adoption stage (early/growing/mainstream), (4) One specific action a marketing team should take now to capitalize on it, (5) One company already doing this well. Rank by urgency (which trends need action soonest).

What it does: Creates a trend report that keeps you ahead of the curve. Most marketers react to trends — this helps you anticipate them.

Pro tip: Run this quarterly and compare results. Trends that keep appearing are the ones to invest in heavily.

Design a customer survey to understand [specific goal, e.g., why customers churn / what features to build next / how customers found us]. Target respondents: [audience]. Create: (1) 10-12 questions (mix of multiple choice, rating scale, and open-ended), (2) Logical question flow (easy questions first, sensitive questions last), (3) For each question, explain what insight it reveals and how to use the data, (4) A suggested incentive strategy to boost response rates, (5) Sample intro text and closing text for the survey.

What it does: Creates a professional, insight-driven survey in minutes. Bad surveys waste everyone's time — this ensures every question earns its place.

Pro tip: Keep surveys under 5 minutes (10-12 questions max). For every question you add, completion rates drop 5-10%.

Conduct a SWOT analysis for [company/product] in the [industry] market. Context: [brief description of current situation]. For each quadrant (Strengths, Weaknesses, Opportunities, Threats), provide: (1) 5 specific items (not generic), (2) Evidence or reasoning for each, (3) Priority ranking (which items matter most). Then create a 2x2 action matrix: (1) Leverage (use strengths to capture opportunities), (2) Defend (use strengths to counter threats), (3) Improve (fix weaknesses to capture opportunities), (4) Monitor (weaknesses that could be exploited by threats).

What it does: Produces a strategic SWOT analysis with an actionable matrix — not just a list of bullet points, but a decision-making framework.

Pro tip: The action matrix is the most valuable part. Most SWOT analyses stop at listing items — the matrix tells you what to actually DO.

Help me develop a pricing strategy for [product/service]. Current price: [price or "not yet set"]. Target audience: [audience]. Competitors charge: [list competitor prices]. Our key differentiator is: [differentiator]. Analyze: (1) 3 pricing models that could work (and pros/cons of each), (2) Recommended price point with justification, (3) Pricing psychology tactics to apply (anchoring, charm pricing, decoy effect, etc.), (4) A 3-tier pricing structure if applicable, (5) How to test pricing without alienating existing customers.

What it does: Creates a data-informed pricing strategy with psychological principles baked in. Pricing is the highest-leverage marketing decision you can make.

Pro tip: Always test pricing with real customers before committing. Use "founding member" or "early bird" pricing to test lower price points without devaluing the product.

→ Ready to build your complete AI marketing system?

The 5-Day Sprint takes you from prompts to a full workflow. [\[LINK\]](#)

Email Marketing

Save 6-8 hours/month on email copy, sequences, and optimization.

34

The Subject Line Split-Tester

Generate 10 email subject line variations for an email about [topic/offer]. The audience is [audience]. The email's goal is [goal]. Use these frameworks (at least one of each): (1) Curiosity gap, (2) Number/list, (3) Personal/conversational, (4) Urgency, (5) Direct benefit. Keep each under 50 characters. For each, predict the expected open rate (low/medium/high) and explain why. Mark your top 3 picks.

What it does: Creates 10 subject line options with strategic variety and built-in quality assessment. Your subject line determines if your email gets read or buried.

Pro tip: Always A/B test your top 2 picks. Send each to 15% of your list, then send the winner to the remaining 70%.

35

The Welcome Sequence Architect

Create a 5-email welcome sequence for new subscribers who signed up for [lead magnet/offer]. The end goal of the sequence is [goal: purchase, book a call, etc.]. For each email, provide: (1) Send timing (days after signup), (2) Subject line (with A/B alternative), (3) Preview text, (4) Full email body copy, (5) CTA, (6) The strategic purpose of this email in the sequence. The tone should be [tone]. Each email should be under 300 words.

What it does: Creates a complete, strategic welcome sequence that nurtures new subscribers toward your goal. Replaces 4-6 hours of email copywriting.

Pro tip: Email 1 should deliver the promised value immediately. Don't pitch in email 1 — build trust first, sell later.

36

The Newsletter Content Planner

Plan 4 weeks of newsletter content for [brand/company]. Our newsletter goes out [frequency]. Our audience is [audience]. Our content pillars are: [pillar 1], [pillar 2], [pillar 3]. For each issue, provide: (1) Theme/topic, (2) Subject line, (3) 3-4 section ideas with brief descriptions, (4) One curated resource to share, (5) CTA for each issue. Ensure variety across the month and a mix of educational, entertaining, and promotional content.

What it does: Creates a month of newsletter content plans in minutes. No more staring at a blank email draft every week.

Pro tip: Add "include one personal story or behind-the-scenes element per month" — newsletters with personality get 2-3x more engagement.

37 The Re-engagement Campaign

Create a 3-email re-engagement sequence for subscribers who haven't opened an email in [timeframe, e.g., 90 days]. List size of inactive segment: [number]. For each email: (1) Subject line designed to break through inbox blindness, (2) Preview text, (3) Email body (under 150 words – short and punchy), (4) CTA. Email 1 = "We miss you" angle. Email 2 = "Here's what you're missing" with best content recap. Email 3 = "Last chance before we remove you" with clear unsubscribe option. Include a sunset policy recommendation.

What it does: Recovers inactive subscribers or cleans your list — both outcomes improve your email performance and deliverability.

Pro tip: Actually remove people who don't re-engage. A smaller, active list outperforms a large, dead one every time.

38 The Cart Abandonment Sequence

Create a 3-email cart abandonment sequence for [product/service] at [price point]. For each email: (1) Send timing (hours/days after abandonment), (2) Subject line with A/B variant, (3) Email body copy, (4) Psychological approach (reminder, social proof, urgency, incentive), (5) Whether to include a discount (and how much). The sequence should escalate from gentle reminder to urgency without being pushy. Include a recommendation for when to stop the sequence.

What it does: Creates a revenue-recovery sequence that can recapture 5-15% of abandoned carts. This is often the highest-ROI email automation you can build.

Pro tip: Don't lead with a discount in email 1 — many people just need a reminder. Save the incentive for email 2 or 3 to protect your margins.

39

The Email Copy Improver

Here is an email I wrote: [paste email]. The goal is [goal]. The audience is [audience]. Improve this email by: (1) Rewriting the subject line (give 3 options), (2) Strengthening the opening hook (first 2 sentences), (3) Cutting any unnecessary words or sentences (aim for 20% shorter), (4) Making the CTA more compelling, (5) Adding one element of social proof or urgency. Show the improved version with changes highlighted, then explain what you changed and why.

What it does: Turns a good email into a great one with specific, explained improvements. Like having a senior copywriter review your work in 60 seconds.

Pro tip: Use this on every important email before sending. The 60 seconds it takes can meaningfully improve open rates and click rates.

40

The Segmentation Strategist

I have an email list of [size] subscribers for [business/product]. Currently, I send the same emails to everyone. Help me create a segmentation strategy. Based on common e-commerce/SaaS/B2B segmentation best practices, recommend: (1) 4-6 segments I should create, (2) The criteria for each segment, (3) How the messaging should differ for each segment, (4) One automated email trigger for each segment, (5) Expected impact on open rates and conversion rates. Keep it practical – I'm a team of [size].

What it does: Creates a practical segmentation strategy tailored to your team size and resources. Segmented emails get 14% higher open rates and 100% higher click rates.

Pro tip: Start with just 2-3 segments. Perfect segmentation you never implement is worse than basic segmentation you use consistently.

Analytics & Reporting

Save 4-6 hours/month on data analysis, reporting, and insight generation.

41 The Campaign Post-Mortem

Analyze this marketing campaign's performance. Campaign: [name]. Goal: [goal]. Duration: [dates]. Results: [paste all available metrics – impressions, clicks, CTR, conversions, CPA, revenue, ROAS, etc.]. Budget: [amount]. Provide: (1) Executive summary (3 sentences), (2) What worked and why, (3) What didn't work and why, (4) The single biggest lever for improvement, (5) 3 specific, actionable takeaways for the next campaign. Be brutally honest – don't sugarcoat poor performance.

What it does: Produces a structured campaign analysis that's better than most agency reports. Turns raw data into actionable insights in minutes.

Pro tip: Run this after every campaign and save the results. Over time, you'll build a library of learnings that compounds your marketing intelligence.

Here are this month's marketing metrics: [paste metrics from Google Analytics, ad platforms, email tool, etc.]. Last month's metrics were: [paste last month's numbers]. Write a monthly marketing report that includes: (1) Top-line summary for leadership (5 sentences, no jargon), (2) Key wins (with specific numbers), (3) Areas of concern (with context, not just red numbers), (4) Month-over-month trends, (5) 3 recommended actions for next month. Write it so a non-marketing CEO would understand it.

What it does: Transforms raw metrics into a clear, executive-friendly report. Saves 2-3 hours of report writing and makes you look strategic, not just tactical.

Pro tip: Always lead with business impact (revenue, leads, pipeline) not vanity metrics (impressions, followers). Executives care about outcomes, not activities.

Here is our conversion data by channel for the past [timeframe]: [paste channel, spend, leads, conversions, revenue for each channel]. Help me understand attribution: (1) Which channels are most efficient (lowest CPA)? (2) Which channels drive the most revenue per dollar spent? (3) Where should I increase budget and where should I cut? (4) What's likely happening with multi-touch attribution that these numbers don't show? (5) Recommend a simple attribution model for our stage ([startup/growth/enterprise]).

What it does: Makes sense of multi-channel marketing data and provides budget allocation recommendations. Attribution is one of marketing's hardest problems — this gives you a practical framework.

Pro tip: No attribution model is perfect. The goal is "directionally correct," not "precisely accurate." Use this to make better decisions, not to find the "truth."

Help me build a KPI framework for [company/team] in the [industry] space. Our primary business goal is [goal]. Our marketing team is [size] people. Our main channels are [list channels]. Create: (1) 3-5 North Star metrics (the ones that actually matter), (2) 5-8 supporting metrics organized by funnel stage (awareness, consideration, conversion, retention), (3) Recommended tracking frequency for each metric, (4) Benchmarks for each metric (what's good, great, and needs attention), (5) A simple dashboard layout showing how to visualize these metrics.

What it does: Creates a focused KPI framework that prevents "metric overload." Most teams track too many things and act on too few.

Pro tip: If you can't explain why a metric matters in one sentence, you probably don't need to track it. Ruthlessly cut vanity metrics.

Here is our weekly marketing data for the past 8 weeks: [paste data in table format – week, traffic, leads, conversion rate, revenue, etc.]. Analyze this data for: (1) Any anomalies or unusual patterns (spikes, drops, trend changes), (2) Possible explanations for each anomaly, (3) Whether the overall trend is positive, negative, or flat, (4) Leading indicators that predict future performance, (5) 2-3 actions to take based on what the data is telling us. Present findings as if briefing a marketing director.

What it does: Turns raw weekly data into a trend analysis with explanations and action items. Catches problems early before they become crises.

Pro tip: Run this every Monday morning with the previous week's data. It takes 2 minutes and can save you from missing a critical trend for weeks.

Strategy & Planning

Save 4-6 hours/month on strategic planning, experiment design, and roadmapping.

46

The Marketing Experiment Designer

Design 5 marketing experiments to improve [specific metric, e.g., landing page conversion rate / email open rate / ad CTR / organic traffic]. Current performance: [current metric]. Target: [goal]. For each experiment: (1) Hypothesis ("If we [change], then [metric] will [improve] because [reason]"), (2) What specifically to test, (3) How to measure success, (4) Minimum sample size needed, (5) How long to run the test, (6) Expected impact (conservative and optimistic). Rank by expected ROI (impact vs. effort).

What it does: Creates a structured experimentation roadmap with proper hypotheses and measurement plans. Replaces ad-hoc "let's try this" with scientific marketing.

Pro tip: Run only 1-2 experiments at a time. Too many simultaneous tests make it impossible to attribute results.

Help me create a Q[X] marketing plan. Business context: [brief company/product description]. Last quarter's results: [key metrics]. This quarter's business goal: [goal]. Budget: [budget]. Team size: [number]. Create: (1) 3 quarterly objectives (specific, measurable), (2) Key initiatives for each objective (max 3 per objective), (3) Monthly milestones, (4) Resource allocation by initiative, (5) Risk factors and mitigation plans, (6) How to know by week 4 if we're on track. Keep it to one page — if the plan is too long, no one will follow it.

What it does: Creates a focused, actionable quarterly plan that fits on one page. Most marketing plans are too long and too vague — this forces clarity.

Pro tip: The "how to know by week 4" section is the most important. If you can't tell whether you're on track after 4 weeks, your goals aren't specific enough.

I'm a [role] at [company type] with a marketing budget of [budget] and a team of [size]. Our target audience is [audience]. We're currently active on [list current channels]. Evaluate each channel and recommend: (1) Which channels to double down on (and why), (2) Which channels to cut or reduce (and why), (3) 1-2 new channels to test (and why), (4) Budget allocation percentage for each recommended channel, (5) Expected timeline to see results from each channel. Prioritize by CAC (customer acquisition cost) efficiency.

What it does: Creates a data-informed channel strategy that prevents the "we need to be everywhere" trap. Focus beats presence every time.

Pro tip: The hardest part of channel strategy is cutting channels. If a channel isn't working after a fair test, kill it and reallocate the budget.

Create a comprehensive marketing launch checklist for [product/feature/campaign]. Launch date: [date]. Target audience: [audience]. Budget: [budget]. Create a checklist organized by phase: (1) Pre-launch (4 weeks before): content creation, asset preparation, partner outreach, (2) Launch week: channel-by-channel activation plan with specific timing, (3) Post-launch (2 weeks after): follow-up campaigns, performance monitoring, optimization. For each item, include: the task, who's responsible, deadline, and dependencies.

What it does: Creates a detailed, phase-by-phase launch plan that ensures nothing falls through the cracks. Replaces 2-3 hours of planning and coordination.

Pro tip: Save this as a template and reuse it for every launch. Each time, you'll refine it based on what you learned from the last one.

You are a CMO with 15 years of experience in [industry] marketing. I'm going to describe my current marketing situation, and I want you to tell me the 3 things you would do immediately if you took over my role tomorrow. Here's my situation: Company: [description]. Product: [description]. Current marketing: [what we're doing]. Results: [current metrics]. Budget: [budget]. Team: [size and roles]. Biggest challenge: [challenge]. Give me your honest, unfiltered assessment. What would you do in your first 30 days? What would you stop doing? What's the one thing I'm probably overthinking?

What it does: Gives you an outside perspective from a "virtual CMO" who isn't afraid to be honest. Sometimes the most valuable thing is someone telling you what to STOP doing.

Pro tip: Run this prompt with different "CMO personas" — a growth hacker, a brand builder, a data-driven marketer. Each will give you different (and valuable) advice.

→ You've got the prompts. Now build the system.
